

XYTHUM RWA PASSPORT

Zero-knowledge cross-chain infrastructure for tokenized real-world assets

PRE-SEED · MAY 2026

\$15 BILLION TRAPPED ON THE WRONG CHAIN

PAIN POINT	WHO LOSES	DOLLAR IMPACT
Idle Collateral T-bills can't earn yield cross-chain.	Ondo, BlackRock, Matrixdock	\$15B+ sitting idle.
Liquidity Fragmentation Bridges create non-composable wrapped versions.	Every DeFi Protocol	bridgeA-USDY ≠ bridgeB-USDY.
Security Risks Every major bridge hack was a key compromise.	The Entire Industry	\$1.4B+ stolen via multisigs.

THE MARKET OPPORTUNITY

\$19.3B

MARKET CAP TODAY

Tokenized RWA market cap
as of Q1 2026 (CoinGecko).

\$15B+

US TREASURIES

Over 76 products and 61K+
holders on-chain (rwa.xyz).

\$18.9T

BY 2033

Projected market size with a
53% CAGR (Ripple + BCG).

"RWAs are the reason new institutional wallets are being created." — Chainalysis 2026

XYTHUM RWA PASSPORT

Lock real assets. **Prove it with ZK.** Mint canonical mirrors.

 ~30s Round-trip

 Zero Fees

 Mathematical Trust

ZK ARCHITECTURE: MATH OVER HUMANS

ORIGIN CHAIN

- **Escrow Contract:** Holds locked RWAs.
- **Block Header:** Contains stateRoot & Merkle proofs.
- **SP1 Prover:** Rust-based ZK-VM program verifies state.

TARGET CHAIN

- **SP1 Verifier:** On-chain verification (~280k gas).
- **Canonical Factory:** CREATE2 deployment of mirrors.
- **xRWA Mirror:** Standard, composable ERC-20 token.

Trust assumptions: Chain consensus + Proof system soundness. Nothing else.

WHAT OUR CUSTOMERS UNLOCK

RWA ISSUERS

Ondo, Matrixdock, Backed

- Zero redeployment cost (\$300k+ savings).
- Instant omnichain usability.
- Drive AUM via new lending demand.

DEFI PROTOCOLS

Aave, Morpho, Native Markets

- Access highest-quality collateral.
- \$250k+/year in spread revenue.
- Institutional-grade risk profile.

ECOSYSTEMS

Monad, Berachain, Movement

- Day-one T-bill liquidity.
- Faster TVL & Institutional growth.
- Infrastructure-level differentiation.

GO-TO-MARKET: THE WEDGE STRATEGY

-  **Phase 1: The Wedge (Months 1-6)**
Pick one issuer (Ondo) and one corridor (ETH → Monad). List as collateral on one protocol to prove demand.
-  **Phase 2: Expand Corridors (Months 6-12)**
Scale to 3+ corridors and 3+ RWA tokens. Marginal engineering cost per new chain.
-  **Phase 3: The Platform (Year 2+)**
Self-service corridor deployment. Proving-as-a-Service for institutional grade reliability.

BUILT, NOT PLANNED

- **Contracts:** Live on Avalanche, BNB, Monad Testnets.
- **Cycle:** End-to-end round-trip working (~30s).
- **Architecture:** SP1 guest program & verifier specified.
- **Whitepaper:** Full security & ZK path documented.
- **Tooling:** Functional CLI and Alpha Dashboard UI.

INFRASTRUCTURE-LED REVENUE

REVENUE STREAM	MECHANISM	TARGET
Corridor Fees	1–5 bps per lock/release transaction.	Scales with TVL volume.
Proving-as-a-Service	Recurring fees for ZK proof compute infra.	SaaS-like Institutional rev.
Premium SLAs	Dedicated support & faster proof generation.	Enterprise customers.
Onboarding Fees	Ecosystem payments for corridor deployment.	New L1/L2 chains.

Targeting \$600k+ ARR at \$2B TVL scale.

WHY US, NOT THEM?

FEATURE	XYTHUM	CCIP / L0	WORMHOLE
Trust Model	ZK Proof	Multi-sig / Oracle	Guardian Nodes
Latency	~30s	20–70 min	15+ min
Fragmentation	Canonical Mirror	Wrapped / Fragmented	Wrapped Tokens
RWA Focus	Specialized	Generic	Generic

"Our security is **mathematical**, not social."

THE ASK: BUILDING THE STANDARD

USE OF FUNDS

- 30% Security Audit (Sherlock/Cantina)
- 20% ZK Proving Infrastructure
- 20% Issuer + Protocol Integrations
- 30% Engineering, Legal & Ops

12-MONTH MILESTONES

- Month 3:** Audit Complete & Mainnet Launch.
- Month 6:** First Major Issuer Partnership.
- Month 12:** 3+ Corridors live with fee revenue.

TOP 20

QUESTIONS?

"The ZK proof **IS** the bridge."
